

Recommendations for Indexing MARC 21 Records: Z Texas and Bath Profiles Standard Identifier Searches

To support the Standard Identifier searches defined in the Z Texas and Bath Profiles, indexing the following MARC21 fields and subfields is recommended. The two right columns include information from *MARC 21 Format for Bibliographic Data: National Level Record---Bibliographic: Full Level & Minimal Level*. Key to the values in the columns:

- A** — Mandatory if applicable. A data element that must be present in a bibliographic record if it is appropriate for the item being described and if the bibliographic information is available.
- M** — Mandatory. A data element that must be present in every bibliographic record. The fill character (|) is not permitted in mandatory data elements.
- O** — Optional. An optional data element is not required in a bibliographic record, but may be present if desired.
- []** — Indicates fields and subfields that are now obsolete, but still appear in older records.

The mark "." signifies that the data element does not form part of the minimal level record requirements group. Data elements marked with "." in the minimal level column are effectively optional and may be used in minimal level records.
